

How to connect to UR_Connected from Mac OS X

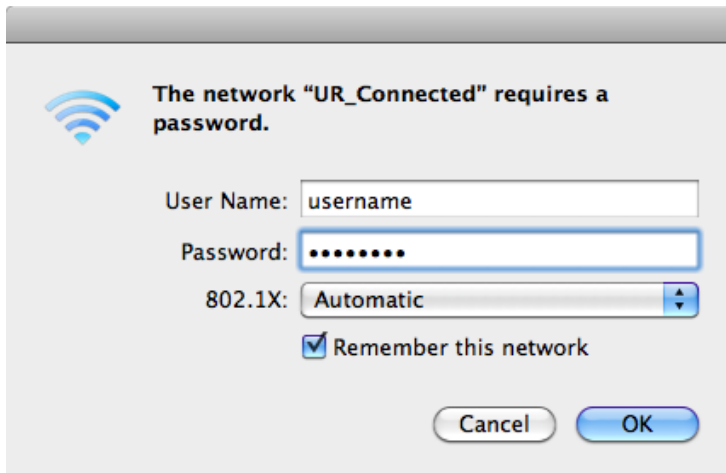

Select the Airport icon (found in the top-right of your screen).

Click on the **UR_Connected** network to connect.

When prompted to login, enter your Active Directory account as the User Name and your Active Directory password as the Password. Ensure that 802.1X is set to **Automatic** and **Remember this network** is enabled. Click **OK**.

If you click on the Airport icon again, you will see that you have now been connected to the UR_Connected network (shown with a **Checkmark** next to it).
