

To OPERATE:

The XD70U video projector has three function buttons on top: **STANDBY**, **AUTO** and **SOURCE**.

1. Attach the video projector to a power outlet.

This will cause the orange standby light to illuminate.

2. Remove the lens cap.

3. Press STANDBY just below the orange light.

The fan will start at this point. The **POWER UP** cycle will last about **45 seconds**. **If** your source is attached, you will see an image. **If not** you will see a blue screen labeled, “**Searching...**”. Proceed to **step 4**.

4. Attach your source (computer, camera or video playback)

This video projector will scan for inputs and automatically project your source. If you are supplying several sources, proceed to **step 5**.

5. Press SOURCE to toggle between multiple inputs.

This will cycle through the supplied inputs; **RGB**, **S-VIDEO** or **COMPONENT VIDEO**.

To POWER OFF:

1. Press STANDBY.

The screen will display “**POWER OFF OK?**” then go dark. The fan will continue for **90 seconds** longer. Once the fan turns off, you may disconnect the projector from power.

2. Replace lens cap.

Please allow full SHUT DOWN cycle to occur.
